Caltech student at DTU

I am taking one core chemical engineering class and three elective courses over here. The courses are very interesting and offer subjects not offered at Caltech. For example, I am taking a special topics course on molten salt chemistry.

I really enjoy exploring Copenhagen, seeing historical sites, beautiful parks, and museums. I also joined the choir at DTU which has been very fun. I have been doing dinners with people that live at my dorm and hanging out, exploring, and travelling with friends I have made here.

Caltech student at DTU

Overall DTU has been lovely. The people are very nice, the classes are interesting, and the campus has a lot to offer.

I did not realize how much courses here would emphasize group projects. Most of my courses do not have weekly assignments and instead have one or two group projects that we do. That means you have to self-motivate studying in the week instead of assignments keeping you accountable. The block schedule is also quite interesting, generally having ~2 hours lecture and ~2 hours of problem-solving time in class. The academic system is set up differently, but the adjustment hasn't been too difficult.
